

# Questions About Your Office Space?

Get Real Data and Answers with Commander™ BI

Decisions about how much office space you need and which kinds of desks and meeting rooms produce the best results have been tough to get right and difficult to calculate... until now. AgilQuest's Commander BI collects workplace data from many sources, crunches your Big Data, and produces the visualizations, dashboards and reports you need to answer to support big decisions.

## Commander BI Answers Your Questions

### Meeting space hard to find?

*Discover how much you're really using.*

### Lease event coming soon?

*Learn how much space you really need.*

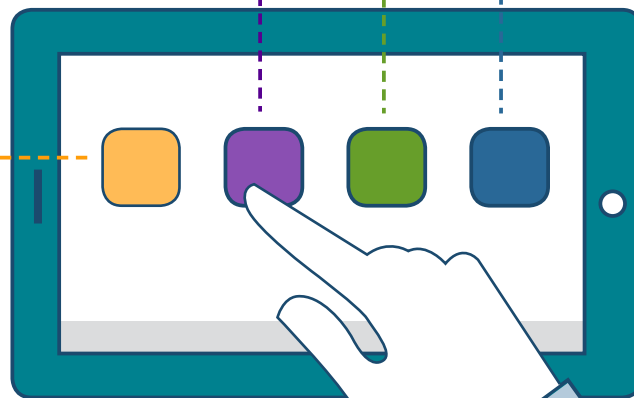

### Reorganizing or restacking?

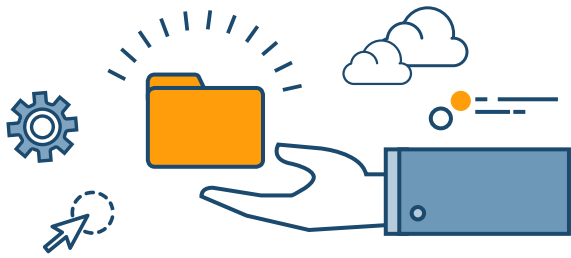

*Get accurate space cost by location.*

### Attract and retain talent?

*Find out which spaces people prefer.*

## Get the Data You Need... Without the High Cost of Surveys

Commander BI was designed specifically to cut the cost of continuous presence data collection and crunch systematically collected data into understandable answers and reports for real estate and space planning needs. Whether you plug it in to a reservation system like AgilQuest's OnBoard®, automatically pull in badge-swipe data from your access control system, or feed network logins and room occupancy data directly from multiple systems, Commander BI analyses data about your entire portfolio and creates reports, dashboard widgets and visualizations to answer the common and often the toughest CRE, FM and workplace questions.

Without the high cost and physical constraints of bed checks or surveys, Commander BI brings in data continuously, consistently and systematically so your answers are more accurate, more up-to-date, and far more believable than just one set of data gathered at a distant location that's already months out of date.

## Blend Data for Higher Value, C-level Reports

The Commander BI platform was designed to allow data from other systems to be combined and joined with real estate and utilization data so as to create answers and reports that are valuable across the entire organization and at the highest levels.

Lease and cost data can be combined with real estate data to provide valuable answers to departments, locations, facilities, and other business units. Personnel and functional role data from HR can be combined with utilization data to report which roles and which locations perform the best at what utilization rates. Growth projections and lease/construction plans can be combined with actual use data. The optional data hub feature of Commander BI extends the value of these answers beyond the workplace program and beyond the corporate real estate office.

Additional modules are available to combine external data sources, extend the self-service and customization capabilities, and more.

We are happy to answer your questions and provide references to satisfied customers when you call our workplace specialists at **877-740-3981**
