

A **woman-owned** small business that leverages a **human-centered** approach to **evolve** the workplace and the built environment

WORKPLACE EXPERIENCE

The alignment of people, process, technology, and place toward new ways of working

FACILITIES & DESIGN

Design for wellness, environment & sustainability with a focus on stakeholder engagement

OUR WORK

01. HYBRID WORKPLACE TRANSFORMATION

Client: Global Medical Technology Association

Outcomes: Improved Employee and Member Engagement, Productivity, and Morale

STEELE is supporting AdvaMed's workplace culture transformation from a traditional office environment to a hybrid workplace experience including a headquarters office relocation and satellite office consolidation as well as with change management for adopting a new space design, technologies, and processes.

02. WORKPLACE TRANSFORMATION & CHANGE MANAGEMENT

Client: Federal Client Workplace Solutions Program (WSP)

Outcomes: Space & Cost Savings and Hybrid Workplace Program Implementation

STEELE helped stand up the Workplace Solutions Program coordinates across a federal agency to facilitate the transformation of the agency's workspace hybrid work environments that employ a combination of integrated technologies with dynamic office designs and agile results-oriented work practices. WSP also supports institutional changes to policy, technology, and space design necessary to foster workforce mobility.

03. OFFICE & MISSION SPACE STANDARDS AND CONCEPTUAL DESIGNS

Client: Federal Client

Outcomes: Space Utilization Reduction & Standards Implementation

STEELE supported the U.S Customs & Border Protection's primary organization for office space management and design through the creation of standards to define the criteria for hybrid work models. We also used these standards to create conceptual space designs for two CBP organizations undergoing hybrid workplace transformations and are currently used for the reconfiguration of all CBP support space across the nation.
